

Procomcure Biotech ("Procomcure") is a biotechnology company located in Salzburg, Austria. Led by a strong team of highly skilled professionals with experience in protein modification, we are currently providing 70% of Austria with our PCR tests. From DNA polymerase kits for daily use to high-sensitive reagents for quantitative PCR's and exclusive one-step-solutions for the gene expression profiling, Procomcure's product line provides a solution for every challenge.

We are the only laboratory that produces and analyses 100% of our tests in Austria, allowing us to guarantee the highest quality and reliability at all times.

What makes us different from other producers:

Quantity: We are able to analyse up to 4.000 tests within six hours daily. We also offer a "Fastline" service, which is able to deliver results within two hours (for an extra fee). Our production capacity amounts to 10 million tests per week and the raw material storage encompasses stock for the production of 200 million Covid-19 tests.

Quality: Our laboratory is highly automated, and the production is supervised under the highest quality standards such as ISO 13485 and ISO 9001. Every single test is reliable and validated by not only the EU but also the FDA. The sensitivity is as follows:

- Clinical sensitivity = $[a/(a+c)] \times 100 = [40/(40+0)] \times 100 = 100\%$
- Clinical specificity = $[d/(b+d)] \times 100 = [42/(2+42)] \times 100 = 97,67\%$

Innovation in Austria: We provide our own proprietary "Gargling / Saliva Collection Kit" which is an innovative way to test subjects for SARS-CoV-2. This method is not only more comfortable for the subjects but also more precise and more reliable than the pharyngeal swab. The Saliva Collection Kit test has the "Gold-Standard-Certificate" issued by the EU and the FDA.

Simple and Easy Service Tailored to your Requirements:

- We offer a tailored service that meets your specific requirements and we send the tests via DHL directly to your institution.
- You just send us a list of names, telephone numbers and email addresses of all subjects.
- The subjects can perform the Gargling / Saliva tests themselves (an instruction manual is included). There is no need for a medically trained person to do the tests, which means that none of your valuable time or resources are needed.
- Once You have sent us back the tests, our diagnostics department will analyse them and will inform your subjects via email, including a certificate stating their result.

Highest precision with the fastest analysis: If we receive the tests before 8 am, the results will be ready latest by 12 noon. All tests that we receive between 8 am and 12 noon will be analysed with results ready by 6 pm the same day. There is no faster or more precise way.

The price: The costs of the saliva tests are € 65,- per unit. The price includes the test kit, analysis and from 1.000 test orders and up the delivery to the location of your choice with DHL is included as well. Preferential pricing is available for bulk orders.
